Power Healer

Safe Anti-aging Volume Elastic

Multi Skin Booster

PowerHealer MultiSkin Booster

CPNP Certified

Power healer Multi Skin Booster containing 32 ingredients provide powerful and immediate effects.

 5ml * 5vials

From whitening to wrinkle improvement, moisture supply and skin improvement effect, you can see a variety of effects with one power healer.

It is a reliable product using functional whitening ingredients officially certified by the Korea KFDA

PowerHealer MULTISKINBOOSTER

CPNP Certified

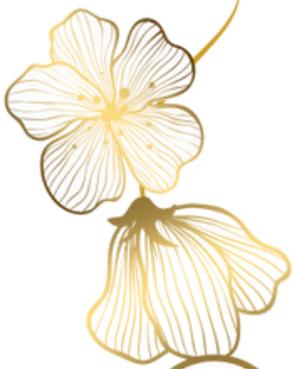

How to Use

including the face, neck, décolletage and hands.

It is a course of treatment, three sessions 2- 4 weeks apart that stimulate the skins fibroblasts and encourage increased production of the skins effective factors.

Benefits

1. Boosts the skin's moisture levels
2. Minimizes pigmentation and enhanced natural glow
3. Antioxidant and diminishes expression lines
4. Soothes skin and reduces Inflammation
5. Accelerates cellular renewal

SUCCINIC ACID

Succinic Acid provides moisture to the skin and It's also a powerful antioxidant, helping to counteract oxidative stress in the skin

COLLAGEN

Hydrolyzed Collagen, Hydroxyproline, L-Cysteine Improves skin elasticity and rejuvenates saggy skin

WHITENING

Glutathione, Ethyl ascorbyl ether Blocks and slow Down Melanin production Removes dead cells from the surface and brighten it

PDRN

PDRN skin redensifying treatments provide skin revitalisation by promoting cell growth through fibroblast stimulation

PowerHealer MultiSkinbooster

Collagen

Glycine

Core components of collagen composition

Hydroxyproline

Proline

Arginine

Helps to produce collagen and antioxidant effect

Lysine HCl

Helps to collagen production

Tryptophan

Histidine

Collagen synthesis and tissue recovery

Methionine

Collagen production and moisturizing

Folic acid

Collagen synthesis

Threonine

Melanin pigment suppression. Collagen synthesis help

Moisturizing

Sodium Hyaluronate

hyaluronic acid. Ingredients for Moisturizing

Aspartic acid

Anti-inflammatory and skin soothing

Serine

Moisturizing and wrinkle improvement

Taurine

Moisturizing and inhibiting melanin pigment

Alanine

Skin moisturizing and barrier strengthening

Isoleucine

Increasing moisture retention and supplying hydration

Inositol

Moisture supply and wrinkle improvement

PowerHealer MultiSkinbooster

Skin Improvement

Pyridoxine HCl

Skin balance control, soothing (inflammation relief) effect

Glucose **Disodium phosphate** **Sodium phosphate**
Essential basic elements that help skin metabolism

Cyanocobalamin

Skin condition control

Leucine

Wrinkle improvement and anti-inflammatory

Tyrosine

Removal of active oxygen

Riboflavin

Skin regeneration and skin tone improvement

PDRN

Biotin

Skin tissue configuration keratin formation key components

Whitening

Niacinamide

functional ingredient notified by the Ministry of KFDA in Korea

Phenylalanine

Skin pigment improvement and whitening

Glutathione

Antioxidation and Whitening

Acetyl Cysteine

Improvement of pigment, Glutathione raw materials

Glutamic acid

moisturizing function, whitening and antibacterial

PowerHealer MultiSkinboosterBenefits

MOISTURIZING

Containing Serine and Taurine, it is effective for skin moisturization.

COLLAGEN synthesis

Skin elasticity and hydration

MELANIN PIGMENT SUPPRESSION

adding antibacterial and antioxidant support to skin

WRINKLE CARE

They work to relax facial muscles making lines and wrinkles, such as worry lines, crow's feet and frown lines, less obvious

WHITENING

Glutathione, Ethyl Ascorbyl ether
Blocks and slow down melanin production

ANTI-OXIDATION

scavenge free radicals from the body cells and prevent or reduce the damage caused by oxidation

SKIN BARRIER FORMATION

If you have a strong skin barrier, it will be able to retain water efficiently, keeping your skin hydrated, smooth, and elastic

SKIN TONE improvement

Niacinamide and Riboflavin work synergistically to effectively brighten and even out the skin tone, providing a radiant and glowing complexion

REJUVENATION

repair of damaged tissue through activation of endogenous

ANTI-INFLAMMATORY

reducing redness and dry skin calms down inflammation

SKIN TISSUE configuration

It creates a protective barrier against injury, hazardous substances, and UV radiation, while preventing moisture loss.

SODIUM HYALURONATE

Composed of long chains of non-sulfated glycosaminoglycans, Hyaluronic acid contributes to maintenance of the skin through dermal fibroblast cell proliferation and migration. The most important property of Hyaluronic acid is its ability to bind water and regulate the hydration of tissues. Hyaluronic acid, whose molecular weight can reach into the millions of daltons, can hold hundreds of times its weight of water.

Derma endocrinol 2012; 4(3):253-8

GLUTATHIONE

Glutathione is a low molecular weight thiol-tripeptide that plays a prominent role in maintaining intracellular redox balance. In addition to its remarkable antioxidant properties, the discovery of its antimelanogenic properties has led to its promotion as a skin-lightening agent. It has become a potential skin-lightening ingredient after the discovery of its anti-melanogenic properties. Various mechanisms of action have been considered to explain this property, one of them being the skewing of the melanin synthesis pathway toward the production of lighter pheomelanin instead of dark eumelanin, consequently producing a lightening effect.

J Cosmet Dermatol 2022; 21(2), J Cosmet Sci 2005; 27(3):147-53

SUCCINIC ACID

Succinic acid helps to boost cellular renewal, and It's also a powerful antioxidant, helping to counteract oxidative stress in the skin. The former promotes skin rejuvenation leaving your complexion looking firm, and the latter protects the skin and keeps it looking bright.

And, Succinic acid is an effective anti-inflammatory and antimicrobial ingredient that helps to inhibit the growth of bacteria. Because of this, it is a fantastic ingredient for blemishes, blackheads and inflammatory lesions; helping to combat the acne without compromising the skin's barrier.

Molecules 2021; 26(15), J Prime 2020

HYDROLYZED COLLAGEN

Hydrolyzed collagen (HC), which has been used as one of the most recent and promising anti-aging systemic supplementation, demonstrated functional and beneficial effects on the skin in several scientific studies, mainly by improving the clinical signs of skin aging.

Several clinical studies evaluated the effects of HC and observed improved dermal collagen synthesis, increased collagen synthesis by fibroblasts, improved skin hydration and elasticity, and decreased wrinkles.

Int J Dermatol 2021

HYDROXYPROLINE

Hydroxyproline is a non-essential amino acid found in collagen and few other extracellular animal proteins. Its two isomeric forms trans-4-hydroxy-L-proline and trans-3-hydroxy-L-proline play a crucial role in collagen synthesis and thermodynamic stability of the triple-helical conformation of collagen and associated tissues. Its two isomeric forms trans-4-hydroxy-L-proline and trans-3-hydroxy-L-proline play a crucial role in collagen synthesis and thermodynamic stability of the triple-helical conformation of collagen and associated tissues.

Biosci Biotechnol Biochem 2012;76(6)

L-CYSTEINE

L-cysteine is a non-essential amino acid and thus is one of the building blocks required for the synthesis of proteins. It is an amino acid that is classified as semi-essential in humans, meaning that the body biosynthesizes adequate amounts of it under normal circumstances. The biosynthesis of l-cysteine requires methionine, which supplies the sulfur needed to make this amino acid. L-cysteine is a non-essential amino acid important for making protein, and for other metabolic functions. Cysteine is important for making collagen. It affects skin elasticity and texture.

COPPER TRIPEPTIDE-1

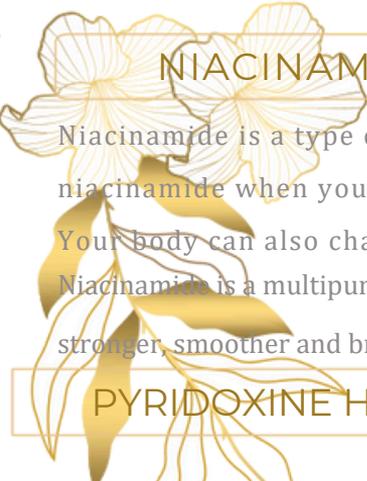

The human copper-binding peptide GHK-Cu (glycyl-l-histidyl-l-lysine) is a small, naturally occurring tri-peptide present in human plasma. Since its discovery in 1973, GHK-Cu established itself as a powerful protective and regenerative ingredient, which is currently widely used in skin and hair products. A number of clinical studies confirmed GHK-Cu's ability to improve appearance of aging skin. GHK-Cu applied for 12 weeks to the facial skin of 71 women with mild to advanced signs of photoaging increased skin density and thickness, reduced laxity, improved clarity, reduced fine lines and the depth of wrinkles.

ETHYL ASCORBYL ETHER

Ethyl ascorbyl ether is an ether-derivative of ascorbic acid, known to inhibit tyrosinase activity, and is widely used in various formulations. It is used especially as an anti-aging agent for skin-whitening and antioxidant purposes.

It has been reported that is the best vitamin C derivative so far, and It is not only chemically stable, but it is easily decomposed by biological enzymes after entering the skin to play the role of vitamin C. The amphiphilicity of ethyl ascorbyl ether makes it easier to penetrate the stratum corneum into the dermis, thus exerting its biological effects. Study has shown that ethyl ascorbic acid is the most stable vitamin C derivative for skin. It has skin benefits for whitening, and anti-aging.

NIACINAMIDE

Niacinamide is a type of vitamin B3, one of eight B vitamins that support many aspects of your health. Your body makes niacinamide when you have too much niacin in your body.

Your body can also change an amino acid called tryptophan into niacinamide.

Niacinamide is a multipurpose skin care ingredient. It helps build keratin, a protein that maintains skin health. It's also been shown to make your skin stronger, smoother and brighter.

PYRIDOXINE HCL

Vitamin B6 supports moisturized, supple skin, and full lips. Insufficient amounts of B6 can result in dry, cracking skin, and chapped lips. It helps your skin and body heal quickly and smoothly (less scarring) by aiding in the synthesis of RNA and DNA, the building blocks and blueprints of the body.

HYDROXYPROLINE

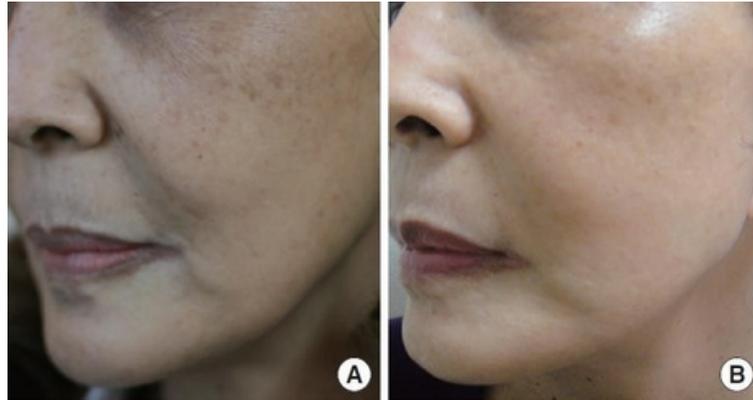

Dipalmitoyl hydroxyproline is an oil-soluble version of hydroxyproline, which is the primary amino acid in collagen. Making it oil-soluble improves penetration into skin and lips, where it works to signal skin from the uppermost layers to repair its supportive elements, leading to fewer visible lines and wrinkles

PowerHealer MULTISKINBOOSTER

CPNP Certified

Clinical cases of various anti-aging effect

(Limited to raw materials)

(A) Before treatment. (B) The skin became healthier and tightened even with some whitening effect by skin revitalization

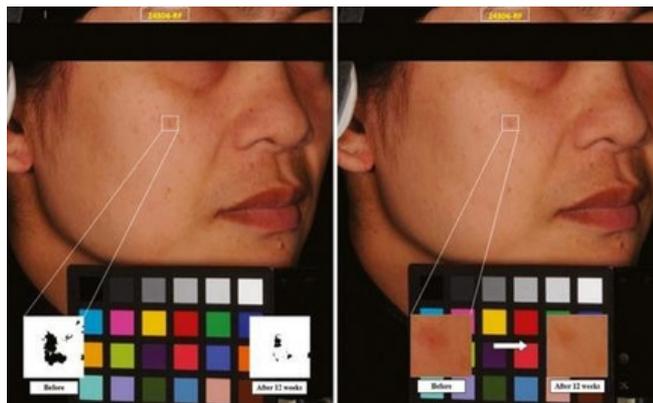

Arch Aes Plast Surg 2014;20

PowerHealer MULTISKINBOOSTER

CPNP Certified

Clinical cases of various anti-aging effect

(Limited to raw materials)

Skin brightening and size reduction of pigmentation spots treatment 12 weeks. Left: evolution of the dark spot after thresholding and binarization; right: evolution of the dark spots in natural color

PowerHealer MULTISKINBOOSTER

CPNP Certified

Succinic acid is an effective anti-inflammatory

(A) Before treatment.

(B) after treatment

PowerHealer MULTISKINBOOSTER

CPNP Certified

Succinic acid is an effective
Add skin luster

(A) Before treatment.
